Distance of A, 1171.28 feet. Distance of B, 842.99 feet. Bearing of B from the tower S. 250 22 54 W., or S.S.W.W. nearly. 34. From an elevated station A the depression of a distant object B was observed to be 1 6, and the elevation of another object C, 1 3CC; also the angle subtended by the straight line BC, 97 36; required the corresponding horizontal angle?--Ans. 97 34 30. 35. The distance between two stations B and C, on a declivity, is 220 yards. At B the oblique angle ABC between C and an object A on the top of the hill was found by a sextant to be 77 8, and at C the angle ACB between B and A 62 18; also at C the elevation of the station B was found to be 8 32, and that of the object A 32 12; required the horizontal distances of the object from the stations, and its height above each of them?--Ans. Distance from C, 279.1 yards. Height above it, 175.7 yards. Distance from B, 263.1 yards. Height above it, 143.1 yards. 36. From a station on the surface of the earth the apparent elevation of the summit of a mountain was observed to be 2 7; and, again, from the summit of the mountain the apparent depression of the station was found to be 2 24 10; also the arch intercepted on a great circle of the earth, between the station and the point immediately under the summit, had previously been computed at 22.064 miles; required the true height of...
